ATTAINED SCALE SCORE EXPLANATIONS

TRUTHFULNESS SCALE: LOW RISK RANGE   RISK PERCENTILE:24
 This is a Low Risk (zero to 39th percentile) score and other scale
 scores are accurate. Denial, minimizing and faking are minimal. This
 person was open, honest and truthful. And, this client has adequate
 reading skills. The Truthfulness Scale identifies self-protective,
 recalcitrant and guarded people who minimize or conceal information.

ALCOHOL SCALE: MAXIMUM RISK RANGE   RISK PERCENTILE:90
 Many self-report indicators of alcohol abuse are evident. However, to
 be safe check if this person is "recovering" (alcohol problem, but has
 stopped drinking). Relapse risk is high. This person's score on the
 Alcohol Scale is in the severe problem (90 to 100th percentile) range.
 With regard to alcohol, this is a Severe Problem risk score.

DRUGS SCALE: PROBLEM RISK RANGE   RISK PERCENTILE:83
 This is a Problem Risk (70 to 89th percentile) score. Drug use or
 abuse is indicated and may be a focal issue in this client's adjust-
 ment problems. Either this person is "recovering" (drug problem, but
 has stopped using) drug user, or this client manifests an established
 pattern of drug abuse. Relapse is possible. This is a Problem Risk
 Drugs Scale score.

DISTRESS SCALE: PROBLEM RISK RANGE   RISK PERCENTILE:86
 This client's Distress Scale score is in the Problem Risk (70 to 89th
 percentile) range. Moods likely vary from agitated to despondent.
 Distress is affecting this person's adjustment. Symptoms include
 unhappiness, discontent, worry, anxiety, apprehension and depression.

RESISTANCE SCALE: PROBLEM RISK RANGE   RISK PERCENTILE:80
 This individual's score is in the Problem Risk (70 to 89th percentile)
 range. Problem Risk scorers are often evasive, resistant and can be
 oppositional. They can resist authority and conflict resolution with
 them is often difficult. This client needs to understand relation-
 ships, attitudes and how his or her outlook impacts on others.

SELF-ESTEEM SCALE: PROBLEM RISK RANGE   RISK PERCENTILE:84
 This person's Self-Esteem Scale score is in the problem (70 to 89th
 percentile) or negative range. This client devalues self, feels
 inadequate and lacks self-confidence. Such persons are often moody,
 worrisome and insecure. Although negative self-esteem is indicated,
 it may be situation-related. This client score reflects negative
 self-esteem.

STRESS COPING SCALE: MAXIMUM RISK RANGE   RISK PERCENTILE:95
 Stress is a focal issue in this person's impaired adjustment. Poor
 stress coping abilities are evident. Stress exacerbates other symptoms
 of emotional and mental health problems. This client likely manifests
 identifiable emotional and mental health problems. This person has
 very serious stress coping problems.

## ATTAINED SCALE SCORE EXPLANATIONS
--------------------------------

**TRUTHFULNESS SCALE: LOW RISK RANGE                    RISK PERCENTILE:10**
 This is a Low Risk (zero to 39th percentile) score and other scale
 scores are accurate. Denial, minimizing and faking are minimal. This
 person was open, honest and truthful. And, this client has adequate
 reading skills. The Truthfulness Scale identifies self-protective,
 recalcitrant and guarded people who minimize or conceal information.

**ALCOHOL SCALE: PROBLEM RISK RANGE                    RISK PERCENTILE:84**
 This is a Problem Risk (70 to 89th percentile) score. Alcohol use or
 abuse is a focal issue. Either an established pattern of drinking is
 evident, or this person is "recovering" (alcohol problem, but has
 stopped drinking). Relapse is possible. Clarify this person's history
 and pattern of drinking. With regard to alcohol, this is a Problem
 Risk score.

**DRUGS SCALE: PROBLEM RISK RANGE                    RISK PERCENTILE:72**
 This is a Problem Risk (70 to 89th percentile) score. Drug use or
 abuse is indicated and may be a focal issue in this client's adjust-
 ment problems. Either this person is "recovering" (drug problem, but
 has stopped using) drug user, or this client manifests an established
 pattern of drug abuse. Relapse is possible. This is a Problem Risk
 Drugs Scale score.

**DISTRESS SCALE: PROBLEM RISK RANGE                    RISK PERCENTILE:73**
 This client's Distress Scale score is in the Problem Risk (70 to 89th
 percentile) range. Moods likely vary from agitated to despondent.
 Distress is affecting this person's adjustment. Symptoms include
 unhappiness, discontent, worry, anxiety, apprehension and depression.

**RESISTANCE SCALE: MEDIUM RISK RANGE                    RISK PERCENTILE:50**
 This person's score is in the Medium Risk (40 to 69th percentile)
 range. Although typically cooperative, stress, substance abuse or
 perceived threat can exacerbate defensiveness, uncooperativeness and
 resistance. This person functions best with clearly understood
 behavioral expectations and consequences.

**SELF-ESTEEM SCALE: MEDIUM RISK RANGE                    RISK PERCENTILE:56**
 This client's self-esteem is relatively intact. Although generally
 positive self-esteem is indicated, some ambivalence or indecisiveness
 regarding "self" is becoming evident. Self-esteem reflects an explicit
 valuing and appraisal of oneself with ambivalent "approval" versus
 "disapproval" features. This is a Medium Risk Self-Esteem Scale score.

**STRESS COPING SCALE: MEDIUM RISK RANGE                    RISK PERCENTILE:61**
 This is a Medium Risk (40 to 69th percentile) range score. Stress is
 not a focal issue in this client's adjustment. Symptoms of stress can
 include irritability, moodiness, substance (alcohol and other drugs)
 abuse, and interpersonal conflict. With regard to stress coping
 abilities, this is a Medium Risk score.
